

# TransLink<sup>®</sup>

**Connectivity with your trading partners to exchange critical business data is the basis for supply chain efficiencies. MISG's Internet-based TransLink service is an affordable EDI connectivity solution.**

TransLink enables your company to send standard EDI documents or flat files to your trading partners that use the Internet, VANs (Value Added Networks) or even the Web for connectivity, and it empowers your company to use the Internet to reduce your EDI costs.

## The TransLink<sup>®</sup> Approach

TransLink is a store-and-forward mailboxing system that connects your company to your trading partners via the Internet through FTP (File Transfer Protocol) sessions. Standard EDI documents or flat files are sent to a TransLink mailbox, translated to another format if desired, delivered to a trading partner's mailbox and retrieved by the trading partner at any time. This enables you to exchange business documents with multiple trading partners without the worry of managing each trading partner relationship or transaction.

TransLink is a server application that has a unique feature – on-network translation. This eliminates the need for in-house translation software or expertise. With TransLink, you can outsource all of your mapping requirements and translation services to MISG.

## TransLink<sup>®</sup> Features

- ▶ Document Level Pricing
- ▶ Low start-up fees
- ▶ Complete trading partner management
- ▶ Bisync, Async, FTP, secure FTP, AS2, VPN and HTTP connectivity
- ▶ Reduced need for internal IT resources with on-network translation
- ▶ Accessibility to trading partners utilizing various networks

## The TransLink<sup>®</sup> Solution

### Now your company can have it all – Availability, Reliability and Performance

TransLink provides full EDI functionality with the convenience of the Internet. With one simple connection, TransLink connects you to all your trading partners seamlessly and consistently.

## Trading Partner Independence

With TransLink you are not limited to the EDI network used by your trading partners. TransLink can receive and deliver flat files or standard formats to your trading partner's mailbox regardless of other networks employed. And because on-network translation can convert files to formats you can integrate with your internal system, your smallest business partners can become your e-trading partners.

Whether you want to use your existing EDI translator, outsource your mapping and translation needs or connect with your trading partners on varying networks, MISG's Internet-based TransLink service will meet your EDI and e-commerce needs.
